

ABSTRACT

The invention provides novel polynucleotides and polypeptides encoded by such
5 polynucleotides and mutants or variants thereof that correspond to a novel human
secreted LRR protein-like polypeptide. These polynucleotides comprise nucleic acid
sequences isolated from cDNA library from thymus (Hyseq clone identification
numbers 16395938 (SEQ ID NO: 1)). Other aspects of the invention include vectors
containing processes for producing novel human secreted LRR protein-like
10 polypeptides, and antibodies specific for such polypeptides.
